

Issue Identification Document

Multimedia Portfolio Website

1. Overview

This document identifies the issues found in the HTML and CSS code that was given for the Multimedia Media Production Company Website. The code lacked modern layout techniques, responsiveness, accessibility and advanced CSS features.

2. HTML Issues

2.1 No semantic structure

- The <div> element was overused in these files instead of using semantic tags like <header>, <main> and so on.
- Reduced accessibility and readability

2.2 Missing Viewport meta tag

- No responsive responsive scaling for mobile devices
- No lang="en" in the <html> tag

3. Form issues

- No <label> tags, therefore, poor accessibility
- Incorrect input types for email and phone
- No validation attributes such as require
- No advanced inputs such as radio inputs
- No grouping using <fieldset>

4. Media implementation issues

- <video> missing controls and fallback text
- Second video missing
- No <audio> tag
- No <iframe> tag for location/map
- Images missing the alt attribute
- No <figure> and <figcaption>

5. CSS issues

5.1. No layout systems implemented

- No flexbox used for navigation or layout
- No CSS grid used for galleries or page structure
- Layout relies on basic block elements

5.2 Poor navigation styling

- Navigation is not using flexbox
- Links spaced using margin-right
- Not responsive

5.3 Missing responsive design

- No media queries implemented
- Layout not optimized for mobile devices

5.4 Limited selector usage

- Only basic selectors used
 - Element selectors - body, img
 - Class selectors - .top, .nav
- Missing
 - Attribute selectors
 - Child and descendent selectors
 - Pseudo-classes - :hover, :focus, :active, :valid / :invalid

5.5 No visual enhancements

- No transitions or animations
- No transforms (scale, translate)
- No gradients or text effects
- No shadows or depth
